Wait a moment and try again. I'm looking for the latest launcher apk to update, preferably from latest 15.6 Eu weekly beta rom (October build and onward). Currently using Apollo Pro, stuck on August 4 build because of camera libs issue. Would appreciate it if someone were to help me. Those on apkmirror are from stock miui, installing them will result in losing some additional customization+functionalities (Revert possible). And I already looked into extracting from rom zip, but it's too much of a hassle, so I wish to try asking for help here. It'd be way quicker when someone who's running latest eu build create an apk backup, then upload it.
